# ADDING FRACTIONS WITH LIKE DENOMINATORS
Problem:

$$\frac{1}{4} + \frac{2}{4} = \ ?$$

Solution:

- Here, the LCM of the denominators is 4.

- Now simply add the numerators here. You will get the summation = 1 + 2 = 3.

- So the summation will be $\frac{3}{4}$

$$\frac{1}{4} + \frac{2}{4} = \frac{3}{4}$$
