

# Do the part-part Whole

Roger is facing some problems welcoming his guests. A total of 15 guests have come and 7 of them like coffee and others like tea. How many cups of tea does Roger need to make?

$$\text{So, } 7 + \square = 15$$

$$\Rightarrow \square = 15 - 7$$

$$\Rightarrow \square = 8$$

7	8
15
