Division Facts Board Game

Instructions

- Player one draws a card and does one of the following.
 - ✦ If the card has an expression on it the player solves it.
 - ✦ If the card is a picture the player moves to that picture on the game board.
- Once the expression is solved, player two checks the answer with a calculator. If the answer is correct, player one moves up the game until they land on a space that is the same color as the card they drew.
- But if player one answers wrong, then they do not get to move up.
- Now it is player two's turn, and the same steps are made.
- The game ends when one player reaches the last yellow space!
