

1. A school has 288 students. Among them 115 students are boys. Suppose you are a student of that school. You have 45 students in your class. In the last math test, 42 students passed. You have got 78 out of 100. Your friend Paul has got 60. As he had got fewer marks, he was sad. You have 18 chocolates and gave 12 chocolates to Paul from that.

- How many girls are there in your school?
- How many students have failed in the last test in your class?
- Calculate the number Paul got lower than you.
- How many chocolates did you have after giving Paul?

2. A book selling shop has 335 books. A man came to the book shop and bought 32 books. The total price of the 32 books is 225 dollar. The man gave 300 dollars and want the change. Another man came and bought 22 books. Again the book seller gave 3 books as a gift to his son.

- How many books are left after selling first tme in the book shop?
- Calculate the change money that receive the buyer.
- How many books are left after selling to the second man.
- Calculate the remaining number of books after giving gifts.
